

Customer Journey Map

Standard Laptop Procurement & Configuration

SCENARIO			Requesting, approving, configuring, and completing a standard laptop through ServiceNow		
	ENTICE Need identified	ENTER Request	ENGAGE Approval & automation	EXIT Configuration	EXTEND Completion & feedback
STEPS	Recognize the need for a standard laptop	Open ServiceNow and select Standard Laptop	Submit request → approval → Flow Designer creates Catalog Task	Hardware team opens the task and configures the laptop	Laptop is ready; request records provide traceability
INTERACTIONS	Employee / IT procurement discussion	Service Catalog → Hardware → Standard Laptop → Order Now	Request, Approval, Requested Item, Flow Designer	Catalog Task assigned to Hardware; configuration work	Request / task records; user receives configured device
GOALS & MOTIVATIONS	Help me get the right laptop without delay	Help me submit the request quickly and correctly	Help me know the request is progressing and avoid manual follow-up	Help me get the laptop configured as soon as possible	Help me receive a usable laptop with minimal waiting
POSITIVE MOMENTS	Clear need and standard item	Simple catalog ordering path	Automatic task creation after approval	Clear ownership by Hardware team	Faster, more predictable completion
NEGATIVE MOMENTS	Unclear procurement status can create uncertainty	Manual request steps may be time-consuming	Approval dependency can delay progress	Configuration can be overlooked without automation	User waiting time may increase if tasks are not tracked
AREAS OF OPPORTUNITY	Standardize laptop request requirements	Improve catalog item instructions and request validation	Add notifications, escalation and SLA-based actions	Extend automation to more hardware and routing rules	Add dashboards for approval and configuration turnaround
