

Project Design Phase
Proposed Solution Template

Date	03 October 2026
Team ID	SWTID-2026-1749
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The current IT procurement process lacks efficiency and automation, particularly for standard laptop orders. Standard laptop requests often require configuration, but this step can be overlooked or delayed. This creates manual overhead, increases user waiting time, and can result in inefficient allocation of IT resources.
2.	Idea / Solution description	The proposed solution uses ServiceNow Flow Designer to automate the standard laptop procurement workflow. A Service Catalog request is used to place the Standard Laptop order. After the request is approved, the flow automatically creates a Catalog Task, sets the short description and description to indicate that the laptop needs configuration, assigns the task to the Hardware group, and sets the approval value to Approved. The flow is then associated with the Standard Laptop Service Catalog item so the process can run automatically.
3.	Novelty / Uniqueness	The solution connects the Service Catalog request, approval, and hardware configuration task through one Flow Designer workflow. Instead of requiring the IT team to manually create and assign a configuration task after approval, the workflow automatically creates the Catalog Task and routes it to the Hardware assignment group. This provides a consistent and repeatable process for standard laptop requests.

4.	Social Impact / Customer Satisfaction	The automated process is intended to provide a seamless experience for users requesting standard laptops by ensuring timely configuration. It reduces manual intervention and potential errors, improves resource utilisation through task allocation, and supports greater efficiency and productivity in IT procurement operations.
5.	Business Model (Revenue Model)	The source project document does not specify a separate commercial revenue model. Its stated business value is operational: reducing manual overhead, improving resource utilisation, reducing delays, and improving productivity within the IT department through ServiceNow Flow Designer automation.
6.	Scalability of the Solution	The source demonstrates the workflow for the Standard Laptop Service Catalog item. The same Flow Designer approach can be extended to other IT hardware or service-request workflows by changing the catalog item, task details, approval conditions, and assignment group. The source does not provide quantified scalability limits or deployment metrics.
